

The microbiological ActiveCube reduces significantly scale being deposited in the siphon and in the soil pipes.

Biological
pH neutral
ActiveCube
Killer

- Applications:
- urinals
 - waterless urinals
 - urinal trough
 - floor drains

Product performance: The URIMAT MB-ActiveCube is a microbiological odour and deposit killer. After the pipes got cleaned, the MB-ActiveCube significantly reduces the development of scale in the pipes and around the siphon. The reduced risk that the pipes get blocked leads to substantial savings in routine maintenance.

Properties: With regular application, the microorganisms significantly reduce encrustations and soften scale deposits, keeping the siphon and the soil pipes free permanently. Unpleasant smells are simply broken down.

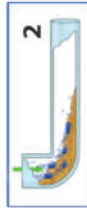

Contents: bacteria, block polymers, perfumes.

Environmental features: Not hazardous for humans or animals. Marine animals are not affected. Compatible with sewage treatment plants.

Do not use acidic cleaners or cleaners containing chlorine in addition to URIMAT MB-ActiveCube. For regular maintenance cleaning in sanitary installations, we recommend the use of URIMAT MB-ActiveCleaner, which also works microbiologically.

1 Deposits and encrustations caused by hair, organic material, oils, fats etc.

2 The microorganisms in the MB-ActiveCube penetrate the deposits and encrustations...

3 ...simply break them down and soften them up, will be washed away by urine.

4 When MB-ActiveCube are used regularly, siphon and soil pipes remain clean and free of unpleasant smells.
